Portfolio: personal-portfolio0729.vercel.app

Software Engineer at Microsoft building production cloud services and AI-enabled incident response, and reliability automation for observability partners.
Work spans distributed big data processing, release automation, incident response, and performance engineering.

Technical Skills

Languages: C#, C++, TypeScript, SQL, PowerShell
Frameworks & APIs: .NET, REST APIs
Cloud, DevOps & Operations: Azure, Azure DevOps, CI/CD, observability, incident-response automation
Data & AI: Kusto, PostgreSQL, AI agent workflows, Azure AI Foundry
Developer Tools: Git

Experience

Microsoft July 2025 – Present
Software Engineer *Hyderabad, India*

- Engineered a configurable, self-scheduling archival cleanup service for approximately **2,000,000 daily messages across 22 regions**; added transactional batching and bounded parallelism, reducing a comparable 170,000 entities run from 16 minutes to 50 seconds (19× faster).
- Co-developed a configuration-driven Release Orchestrator Agent for **3 services**, contributing workflow configuration, rollout reliability, and operator onboarding.
- Developed partner-specific handlers for an AI-enabled incident-response agent, integrating Kusto diagnostics, environment-aware routing, operational actions, and historical-incident correlation; evaluated **across 3 cloud-service partners and 40 incident cases.**
- Implemented end-to-end rate-limit resilience across partner clients and resource-provider APIs using bounded `Retry-After` backoff and header propagation, validated through unit, canary, and end-to-end testing.

Microsoft May 2024 – July 2024
Software Engineer Intern *Hyderabad, India*

- Designed and executed a customer-facing Azure service feature for **4 independent software vendors**, contributing to service integration and production readiness.

Research

Research Project | **IIT Roorkee** Jan 2025 – Jan 2026

- Optimised wireless-sensor clustering and path reliability for real-time environmental data collection in agriculture.
- Developed and evaluated UAV path-planning algorithms, reducing mission time by **81%** and path cost by **45%**.
- Applied solutions to agriculture use-cases enabling farmers for real-time environmental data collection.

Projects

MedAI | GitHub

- Led a team of 10 to design and develop a **diagnostic expert system**, managing Agile sprints, backlog, and technical documentation.
- Built **REST APIs** connecting the user interface and ML model, and implemented an automated model-retraining workflow.

Education

Dhirubhai Ambani Institute of Information and Communication Technology May 2025
B.Tech, Information & Communication Technology; Minor in Computational Science *GPA: 9.11/10*
